

Who is 21st Century Software?

21st Century Software has led the industry for years with mainframe recovery solutions and experienced support resources that let corporate executives sleep at night knowing they are recoverable.

21st Century Software

- >> 20+ years in the business of providing system recovery
- >> Global recovery solutions
- >> Employee owned
- >> 100+ Fortune 1000 companies as customers

21st Century Software Corporate Vision Statement

The vision of 21st Century Software is to be the industry leader in corporate information protection through the installation of tools and processes that guarantee availability and protect a company's brand in a global market.

Beliefs/Values are Difference Makers

- >> Client Success – working side by side with our clients
- >> Strongest DR experience of any vendor in the market
- >> Meet Commitments and Expectations
- >> Listen to clients and our employees and fulfill obligations
- >> Technical Ability and Teamwork
- >> Formal and informal teaming
- >> Quality, focused capabilities with results

Product Offerings Overview

- >> Service (Recoverability) Assessment
 - Shows GAPS and liabilities of a company's continuous recoverability
 - Identified High Availability solutions may not provide the necessary recovery to meet your stated RTO objectives for key business applications
- >> Tape Assist
 - Simple tool that allows transfer of data between despaired storage devices without user interface
- >> Tape Assist Services
 - 21st Century Software resources manage one-time migrations for clients
- >> DRVFI
 - Core 21st Century Software product used as a tool or appliance that will assure recoverability. It reports where daily gaps occur across critical systems, ensuring a recovery that will meet the company's business objectives.
 - This product identifies the exact files that will cause problems in recovery and identify how to resolve identified conflicts.
 - Reduces the DR Testing process by a factor that will reduce resources required that can pay for the annual DRVFI license and maintenance.

High Availability solutions will not resolve all or complex recoverability of applications. Storage data sets that are in-flight with tape and other medias will not allow most customers to be recoverable. All of these factors affect High Availability solutions that depend on various other media.

Challenge us to prove it with a corporate Assessment. It is FREE if you are recoverable with no GAPS.
